SIMPLE. EASY. RIGHT.

- QUICK CHANGE TOOLING SOLUTIONS
- CLAMPLESS/ BOLTLESS WORKHOLDING
- LOW COST VISE SOLUTIONS
- MODULAR WORKHOLDING SOLUTIONS & COMPONENTS
- SIGNIFICANT REDUCTION IN SETUP TIMES

INVERT-A-BOLT™ FASTENERS

Great for High Speed Machining

- Eliminate Vibration in the setup. Stable setups enable using optimal feed-rates for the most efficient use of the machine tool.
- Eliminate Obstructions to the work environment. Obstructions create hazards ultimately incurring additional and unnecessary costs.

Better Than a Clamp

- Won't induce warpage or other part stresses.
- Eliminates clamp changes.
- Eliminates clamp blocks.
- "Clamp" or "Unclamp" in 2.5 seconds or less.
- Simple design makes installation and maintenance easy.

Better Than a Bolt

- Tiny "footprint" is almost completely out of the way of the machining process.
- Machine right over the top of the fastener while continuing to hold securely.
